Taking ineo office systems  
into the clouds

Today's office is a mobile, fast-changing place. Equipped with tablets and smartphone, office workers are increasingly cultivating a mobile, flexible work style that is independent of time and place. Popular cloud services such as Google Apps™, Evernote™ and Microsoft SharePoint™ are part and parcel of this mobile work scenario. But unfortunately, multifunctional office systems and cloud services do not interact very easily. So when office workers need to print a document from their Evernote notebook or scan a document to Google Drive, for example, they are faced with tiresome, time-wasting procedures. This is where DEVELOP's ineo connector apps provide welcome relief.

## Connectivity

ineo connector apps connect ineo office systems to the most popular cloud services and ideally support the mobility and flexibility required in today's offices.

### > Three different apps

Three different apps – specifically developed for Google Apps, Evernote and Microsoft SharePoint – facilitate and simplify cloud-device interaction so that ineo multifunctionals seamlessly connect to the respective cloud service and save office workers a great deal of time and effort in their everyday work.

## The decisive advantages

Whichever of these three cloud services an office worker uses, the ineo connector apps offer a number of decisive advantages:

### > Direct cloud access from device panel

The ineo connector apps overcome the connectivity problems between cloud services and multifunctional office systems. So office workers can interactively connect to cloud-based functions straight from the operating panel of an ineo multifunctional.

### > Single sign-on functionality

People are tired of time-consuming login procedures. But with these ineo connector apps supporting single-sign-on functionality, all office workers have to do is swipe their credentials card to authenticate on the multifunctional system and the cloud service. This way, office workers can concentrate on the essentials instead of wasting time on lengthy login procedures.

### > Significant time savings

All three ineo connector apps save office workers a great deal of time in many routine tasks through seamless connectivity between ineo multifunctional devices and the respective cloud service.
